

## EXPERIENCE

---

### Developer Fellow, Code for Canada – Nov. 2020 - Aug. 2021

Participation web interface for participants in Canada Energy Regulator hearings

- Performed a UI overhaul to significantly improve usability.
- Worked on an interdisciplinary team to perform requirements analysis and user research.
- Innovated within government and regulatory constraints.
- Leveraged knowledge of HTML, CSS, JavaScript, accessibility best practices, C#, ASP.NET MVC, Entity Framework, and the Government of Canada's Web Experience Toolkit.

### Engineering Intern, Hansen Technologies – Sept. 2018 - Aug. 2019

Hansen Provision

- Developed the product's frontend in React using TypeScript and MobX.
- Proposed and carried out a refactor that improved maintainability and saved over 1600 lines of code.
- Designed an e-learning course about Docker which became part of a company-wide training course for professional services employees.
- Leveraged knowledge of React, TypeScript, MobX, Node.js, Express, SCSS, and Docker.

### Computer Science Tutor, Freelance – Feb. 2021 - Apr. 2021

- Helped first-year university students learn C programming and computer science concepts.

### Volunteer, Learning Lions – Sept. 2020 - Dec. 2020

- Created courses about web accessibility and Visual Studio Code for the web development curriculum.

## EDUCATION

---

### University of Toronto – Jun. 2020

Honours Bachelor of Science with High Distinction

- Major in Computer Science; second major in Philosophy.
- **GPA:** 3.8
- **Coursework:** Operating Systems, Data Structures, Algorithms, Web Development, Databases, Natural Language Processing, Formal Logic
- **Awards:** Dean's List Scholar, St. Michael's College Silver Medal, Lawrence E. Lynch In-Course Scholarship in Philosophy, C. L. Burton Trust In-Course Scholarship

## CERTIFICATIONS

---

AWS Certified Developer - Associate, Jun. 2021

## PROJECTS

---

### License Plate Reporter

- A web app allowing users to report and query the license plates of dangerous drivers.
- A serverless backend using AWS API Gateway, Lambda, and DynamoDB plus a React frontend.

### Todoist Calendar View

- Leverages Todoist's API to let Todoist users view their tasks in a weekly calendar view.
